

Çekrezi Metal

Albania's trusted partner for **metal recycling** & circular economy

Çekrezi Metal provides:

- **Ferrous Scrap Collection & Trade**
- **Non-Ferrous Metal Recycling**
- **Scrap Processing & Packaging**
- **Demolition & Waste Removal**
- **Import-Export of Scrap Metals**
- **Transport & Logistics**

Materials Handled

Ferrous: Iron & steel scrap, cast iron, old vehicles

Non-Ferrous:

- Copper & copper cables/wires
- Aluminum & dural
- Lead, zinc & tin
- Stainless steel
- Batteries & radiators
- Electronic scrap (cans, components)

Collection Points

- Tirana — Vaqarr (HQ)
- Durrës
- Fier

Certifications

- ISO 9001 — Quality Management

Çekrezi Metal Sh.p.k. is one of Albania's leading scrap metal recycling and trading companies, founded in 2009 and headquartered in Vaqarr, Tirana. Operating three collection points across Albania — in Tirana, Durrës, and Fier — the company is a full-service provider of ferrous and non-ferrous scrap collection, processing, export, and waste management. With over 500,000 tonnes of materials processed, 300 business partners, and 140 completed projects totalling €50 million, Çekrezi Metal has established itself as a reliable, certified, and operationally proven partner for the regional and international scrap metals market. The company is an AmCham Albania member and operates in full compliance with EU environmental and quality standards.

Ferrous & Non-Ferrous Scrap Recycling. Çekrezi Metal handles the full spectrum of recyclable metals. On the ferrous side, the company collects and processes iron and steel scrap, cast iron, and end-of-life vehicles. Its non-ferrous operations cover copper, aluminum, dural, lead, zinc, stainless steel, cables and wires, batteries, radiators, and electronic scrap — materials with high intrinsic value and strong demand from European steelworks, smelters, and secondary metal producers. The company operates industrial-grade machinery for pressing, shredding, processing, and packaging of metal scrap to export-ready specifications, with on-site 70-tonne scales and a fleet of trucks, trailers, and heavy lifting equipment.

Industrial Projects & Demolition Services. Beyond routine scrap collection, Çekrezi Metal plans, manages, and executes large and small-scale recycling projects including industrial site clearance, waste removal, and structural demolition. The company has completed 140 projects with a combined value of €50 million — demonstrating a capacity for complex, multi-site engagements with public and private sector clients. These projects include the decommissioning and material recovery from industrial facilities, infrastructure assets, and construction sites across Albania, with full transport, processing, and export logistics managed in-house.

Environmental Compliance & Circular Economy. Çekrezi Metal holds four internationally recognized management certifications: ISO 9001 (Quality), ISO 14001 (Environmental Management), OHSAS 18001 (Occupational Health & Safety), and ISO 39001 (Road Traffic Safety) — all certified by AQSCERT and aligned with European standards. This positions the company as a credible circular economy partner as Albania progresses toward EU accession and is required to meet increasingly stringent environmental directives on waste management, metal recovery, and end-of-life vehicle processing. The company's annual recycling capacity of 50,000 tonnes makes it one of the largest processors in the Albanian market.

US Market Alignment & Partnership Potential. Albania's EU accession trajectory is accelerating investment in environmental compliance infrastructure, including advanced recycling technology, waste-to-resource platforms, and circular economy systems. Çekrezi Metal — with its established processing infrastructure, certification framework, and 300-partner commercial network — is the natural on-the-ground partner for US companies in the environmental technology, recycling equipment, and circular economy investment space. The

- ISO 14001 — Environmental Mgmt
- OHSAS 18001 — Health & Safety
- ISO 39001 — Road Traffic Safety
- NCC Licensed (Albania)

company also offers an established import-export platform for US scrap metal traders and commodity firms seeking a licensed and operationally capable counterpart in the Western Balkans.

Çekrezi Metal Capabilities Include

- Ferrous Scrap Collection & Processing
- Non-Ferrous Metal Recovery (Cu, Al, Pb, Zn)
- Industrial Shredding, Pressing & Packaging
- End-of-Life Vehicle Dismantling & Recovery
- Scrap Metal Export (regional & international)
- Industrial Demolition & Site Clearance
- Waste Removal & Material Recovery Projects
- In-house Transport & Heavy Logistics
- 70-Tonne Weighbridge Operations
- Multi-location Collection Network (3 sites)
- Import-Export Licensing & Trade
- ISO/OHSAS-certified Environmental Operations

Key Company Facts

- Founded: 2009, Vaqarr, Tirana, Albania
- 3 collection points: Tirana · Durrës · Fier
- 500,000+ tonnes of materials processed
- Annual recycling capacity: 50,000 tonnes
- 140 projects completed · €50M total value
- 300 active business partners
- ISO 9001 · ISO 14001 · OHSAS 18001 · ISO 39001
- NCC Licensed — Albania
- Full ferrous & non-ferrous processing capability
- AmCham Albania Member

US Partnership Opportunities

Çekrezi Metal offers US environmental technology, recycling, and commodity trading companies a licensed, certified, and established partner in Albania. As Albania's EU accession accelerates environmental compliance investment, demand for advanced recycling infrastructure and know-how will grow significantly. Specific opportunities include:

- Recycling technology & equipment supply
- Scrap metal commodity trading partnerships
- Circular economy co-investment
- End-of-life vehicle processing technology
- Environmental compliance consulting
- Joint ventures for regional expansion
